

KIPCUG Utilities CD information – June 2010

Partial file Descriptions

Antivirus and spyware:

Microsoft security essentials has 3 versions... XP, VISTA/WIN7 32BIT and VISTA/WIN7 64 BIT

Browsers:

Firefox, opera and Google chrome

Rescue cd:

The iso file needs to be burned to a cd and then can be used to boot from on the infected computer. Use Nero or Roxio to burn the iso file or us the burning software that comes with windows 7.

The AVG Rescue CD is essentially a portable version of AVG Anti-Virus supplied through Linux distribution. It can be used in the form of a bootable CD or bootable USB flash drive to recover your computer when the system cannot be loaded normally, such as after an extensive or deep-rooted virus infection. In short, the AVG Rescue CD enables you to fully remove infections from an otherwise inoperable PC and render the system bootable again.

Registry cleaner:

CCleaner is a freeware system optimization, privacy and cleaning tool. It removes unused files from your system - allowing Windows to run faster and freeing up valuable hard disk space. It also cleans traces of your online activities such as your Internet history. Additionally it contains a fully featured registry cleaner.

Utilities:

Belarc

The app analyzes a machine's weak points, looking at elements such as whether antivirus software is up to date, or whether all the security flaws in Windows have been patched. It uses the Center for Internet Security (CIS) benchmark test to give the computer a score showing its overall security level, and produces a report that can be viewed in a Web browser.

Not only does it analyze software and operating system components and tell you where problems are, but in its comprehensive report it tells you what your computer's physical components are: not just how much RAM you have, for example, but what kind of RAM and which slots are occupied. Also will show your product key for windows and other programs. (cnet editors info)

System info and speedfan also show similar information about your computer.

Revo uninstaller

Revo Uninstaller is a freeware innovative uninstall utility much faster than Windows Add/Remove applet. With its advanced and fast algorithm, Revo Uninstaller scans before and after you uninstall an application. After the program's regular uninstaller runs, you can remove additional unnecessary files, folders and registry keys that are usually left over on your computer. Even if you have a broken installation, Revo Uninstaller scans for an application's data on your hard disk drives and in the Windows registry and shows all found files, folders and registry items so you can delete them.

Prey

Prey is a lightweight application that will help you track and find your laptop if it ever gets stolen. It works in all operating systems and not only is it Open Source but also completely free.

Prey helps you locate your missing laptop by sending timed reports with a bunch of information of its whereabouts. This includes the general status of the computer, a list of running programs and active connections, fully-detailed network and wifi information, a screenshot of the running desktop and — in case your laptop has an integrated webcam — a picture of the thief.

NoScript for Firefox

Winner of the "2006 PC World Class Award", this tool provides extra protection to your Firefox.

It allows JavaScript, Java and other executable content to run only from trusted domains of your choice, e.g. your home-banking web site, guarding your "trust boundaries" against cross-site scripting attacks (XSS) and Clickjacking attempts, thanks to its unique ClearClick technology.

Such a preemptive approach prevents exploitation of security vulnerabilities (known and even unknown!) with no loss of functionality...

Experts do agree: Firefox is really safer with NoScript.

Hotspot shield

Hotspot Shield protects your entire web surfing session; securing your connection at both your home Internet network & Public Internet networks (both wired and wireless). Hotspot Shield protects your identity by ensuring that all web transactions (shopping, filling out forms, downloads) are secured through HTTPS. Hotspot Shield also makes you private online making your identity invisible to third party websites and ISP's. Unless you choose to sign into a certain site, you will be anonymous for

your entire web session with Hotspot Shield. We love the web because of the freedom that it creates to explore, organize, and communicate. Hotspot Shield enables access to all information online, providing freedom to access all web content freely and securely. Secure your entire web session and ensure your privacy online; your passwords, credit card numbers, and all of your data is secured with Hotspot Shield. Standard antivirus software protects your computer, but not your web activities.

Device doctor

Device Doctor is a freeware Windows application that scans your computer hardware and checks to see if there are new driver updates available for your devices. It also locates drivers for Unidentified Devices in the Windows Device Manager. This tool was designed to be very simple and easy to use.

Identity finder

It will detect unprotected credit cards and passwords on your computer that are vulnerable to identity theft or fraud. Once found, you can permanently shred or encrypt the information with a password so identity thieves cannot steal them. Take the first step towards protecting your family, your employees, and your business; try Identity Finder today. Version 4.0.1.3 includes free digital shredder and file vault (encryption) for use anywhere within Windows.
